of the embassy, Mr. McCreery, and a clasp of a delicate hand given to each. Years of executive care have left as little mark on the face of President Diaz as has the activity left the imprint of roughness upon the long, slim fingers.

FAITHFUL WORSHIPERS. In Diaz is placed a faith and adoration road to the sacred shrine of Guadalupe have traveled the four miles thither from | like \$275,000,000 have been spent. the city. These pilgrimages are no longer made except on rare feast days, and then only by the most devout, but the devotion that prompted them is understood by the Pullman pilgrim who, even after a streetcar ride to Guadalupe, puffs energetically as he ascends to the chapel built in accordance with the legend, sanctioned by Rome, that the Virgin Mary thrice appeared at this spot and commanded a shrine be built there. When the shrine at built, where thousands worship daily. About a sacred well near by groups continually draw water of a saline nature from a spring bubbling from a rock, drinking it with reverence, crossing themselves and thoughtfully passing out. In the new church is the blanket of Juan Diego, the devout Indian, imprinted with the image of the Virgin as recorded in the legend. Above It a crown of precious stones, contributed by Mexican women from their own possessions, that cost \$30,000 for construction alone; before it and all about it, railing of solid silver extending clear across the church, that, melted, would be worth hundreds of thousands. Every 12th of December for over 350 years Indians come by thousands to worship here. When Hidalgo started against the Royalists he took for his banner a picture of this Virgin's image. It became the symbol of liberty in the war against Spain. The highest decoration

created by the Emperor Iturbide was the

Order of the Virgin of Guadalupe.

Little cakes of tierrita, the mud from about the holy well, made with water from the spring, are sold to be eaten near the chapel. The legend of the tilma, or blanket, is one of the prettiest in Mexican history. It is that the Virgin first appeared to Juan Diego Dec. 9, 1531, and told him to bid the bishop erect on the hill where he stood a shrine. The bishop distrusted the ignorant Indian's tale, and even when the Indian, after having seen a similar manifestation the second day at the same spot, reported, bade him bring some evidence of its authenticity. On the third day while seeking a confessor for his dying uncle Juan saw the Virgin, who met him on the opposite side of the hill, told him his uncle was cured and commanded him to gather flowers which sprung from the rocks at his feet. These he took to the bishop in his tilma, and when he opened it there appeared a beautiful painted picture of the Virgin. The bishop thereupon caused the shrine to be erected, the tilma being preserved since its trip to Rome in a glass case, where all may see it. In recent years artists, scientists and high church authorities caused the case to be opened to examine the painting, and all agreed that it was not made by any known process of reproduction. They declared that it was not knit in the tilma, painted or printed thereon, and it is little wonder, if the scientist cannot explain the mystery, that the less learned will continue to invest the painting on the blanket and the country around the sacred shrine where it is kept with more than reverent awe. A. R. KEESLING.

QUESTIONS AND ANSWERS

What is meant by Pan-American?-J. R. Including or pertaining to all America, both the north and south continents.

pear in the Bible?-G. G. R.

It appears in recent English dictionaries as a Scottish term, meaning to glitter or

When was the exposition in New Orleans, and by what name was it known?-J. S.

The World's Industrial and Cotton Centennial Exposition was held in New Orleans from Dec. 16, 1884, to May 31, 1885.

rank as naval powers?-J. G. The French navy is second, our own fourth in the world's navies, and the hold of France on her place is much more secure

England built in the last five years? How many are now under construction?-N. S. England has launched twenty-one firstclass battleships in the past five years. Four are now in process of construction. When did the Prohibitionists first enter

Detailed information concerning them can be obtained from the report of the secretary of the navy, submitted to Congress at the beginning of the present session, or from the Chicago News or New York World Almanac for 1900.

Will you kindly advise me as to the

it warm?-Subscriber. The gulf stream first becomes apparent near the north coast of Cuba, whence it advances eastward to the Bahamas, then, turning northward, follows the Atlantic coast as far as Nova Scotia, swerving then and being lost in mid-Atlantic. At its narrowest point it is fifty miles wide; its greatest breadth is from three hundred to four hundred miles. At its narrowest point is of great depth. Its water is salt; its temperature from ten to twenty degrees higher than that of the surrounding ocean.

MEDICAL NOTES.

(Prepared for the Sunday Journal by

an Old Practitioner.) The tonsils are now exciting almost as much discussion as the appendix vermiformis, that insignificant and apparently useless thing which causes much dreaded appendicitis. There is every reason to believe that the tonsils are wide open portals for the entrance of various infectious diseases into the system. Their situation, their irregular surface and their spongy texture all favor infection. The frequent occurrence of tonsilitis, or quinsy, as it is popularly called, proves their own susceptibilcept the possibility and probability that the tonsils, and lately it has been maintained that a form of heart disease, endorarditis, may also arise in this way. larger ones are Luzon, Mindanao, Samar, While this may be difficult to prove it Panay and Mindaro. 4. The last three to- | should lead to greater attention to a possithe tonsils should be vigorously treated and all measures be used to prevent infection. Speaking of appendicitis, those who believe in progressive evolution and perfection of the human body claim that at some time in their near future a race of men may be evolved having no appendix, that Protestants that arose in the reign of organ having been removed from the pa-Queen Elizabet subsequently to the rents. In the same way, as the removal of acts of Royal Supremacy and Uniformity. | the tonsils is a surgical procedure which

> In all cities where there are competitive examinations for positions in public hospitals there is a good amount of jealousy and the cry of favoritism is often raised when some fortunate applicant receives a coveted position. The number applying is very large. In Paris, for example, there were recently 580 candidates for thirty vacancies. After the papers had been ex-Beaujon in locked and sealed boxes. One morning it was discovered that during the night a panel had been removed in the door and unknown persons had entered. With a thermocautery, an instrument used in surgery, a hole had been burned through each box and nitric acid poured in, thus reducing the papers to pulp. On account of this deed, which must have been perpetrated by medical students, the competition was rendered void and another examination has become necessary. The probable cause for this outrage was a current rumor that the competitions were unfairly conducted and that favoritism had been

Apropos of vegeterianism, with a strict exclusion of meat diet, it is interesting to sufferers from the plague, doubtless owing well as their unsanitary surroundings. Owing to their superstitious and excessive reverence for animal life the necessary measures to prevent the spread of the plague have been resisted, and infected or infection carrying vermin were protected official report says all attempts to capture the rats were fiercely opposed, and picking up a few sick pigeons almost caused a riot. It is safe to say that if these prejudices had not existed the plague would have been more easily controlled and prob-

ably checked in its very inception. The attempt to ostracise and isolate the consumptive has extended to school teachers. A movement has been made to remove is affected with tuberculosis, and it is further proposed to exclude all infectious children. This would, of course, lead to the establishment of special schools, attended by consumptive pupils and taught by consumptive teachers. While it is difficult to say whether such a movement is founded on rational grounds there is no question that there is a certain amount of danger, and locally where such radical sanitary measures have been suggested they have met with almost universal indorsement islands? 3. What is the population of from the profession, who believe these precautions to be in accord with the most recent theories and doctrines of the contagiousness of consumption.

A study of the growth of the finger nails has recently been conducted by Dufour, of Paris. For a nail to reach its full length, an average of seven-twelfths of an inch, from 121 to 138 days are necessary. Beau, however, says that they grow about onethirty-second of an inch a week, which would require but 105 days. Another observer tells of a man twenty-one years of age in whom it took 126 days; a man of thirty-one years in 159 days, and another of thirty-two years in 88 days. At fifty-six years it took 110; at sixty-seven years it took 144. The most rapid growth was noticed in a consumptive who was spitting blood. Salt air hastens the growth rapidly and grief stops the growth almost wholly. In palsy the nails cease growing, a valuable sign in differentiating it from hysteria. The experiment of growth can be roughly tried by any one filing a very shallow horizontal notch across the base

It may be that Metchnikoff has discovered the essence or elixir of long life. the number of blood corpuscles in that animal form 3,000,000 to 8,000,000 in a cubic milimeter. Upon this as a basis Metchnikoff believes that there is hope of finding some means of checking the natural decay of old age, and in fact all changes due to one already having been discovered for the

Dentists as a rule are not favored with remarkably large fees, but in the case of left his widow one of the wealthiest women was the exact commercial ratio between charged was \$20. Twenty-five dollars was hour before Sirius, hence it is named from S. W. Cor. Delaware and Ohio Streets. PRICES \$150 to 25c. Beats now on sale.

whereas the commercial value of silver is and one item alone for regulating the teeth was \$250. This may seem to prove that dentistry is a profitable profession, but let the ambitious dental surgeon consider that millionaires are scarce and the opportunities to present such bills are scarcer.

The tenement house committee of the Charity Organization Society of New York has offered four prizes, ranging from \$500 to \$100, to architects for plans for improved city tenements. The first prize is for houses and lots of 50x100 feet, the second course of the gulf stream? Is it fresh or prize for those 75x100 and the third for salt water, and if fresh water, why, and is houses and lots of 100x100, a special prize of \$100 being offered for the best plan for a house on a lot 25x100 feet. The plans submitted are to be exhibited in connection with the tenement house exhibitions, to be held this winter in New York and other cities. It is rather a curious fact that on the jury of award, which consists of seven members, there is not a single physician.

> Fisher, a German, has recently recommended the use of gelatine tubes as containers for chloroform, claiming that there is no danger of breakage, and that, being hermetically sealed, there is no loss of the contents. These have been found practical and are of great value to the physician. Each tube contains from one to two ounces of chloroform, a quantity more than sufficient for all ordinary persons. For the preservation and transportation of hydrofluoric acid paraffine bottles are commercially used, owing to the fact that this acid "eats" glass, while mercury, owing to its great weight, is sold in iron bottles with screw stoppers when the amount is

The question has lately arisen abroad as to whether a sufferer from malaria is a source of danger to his healthy neighbors. Dr. Foa, of Turin, asserts and maintains that malaria can be indirectly communicated from person to person, and he is indorsed in his views by other expert hygienists. The most practical result of this declaration is that the Society of Hygiene proposed an "order of the day" by which the government was invited to make provision for the sale of quinine to the feverstricken poor at cost price.

Among the many suture materials for sewing up wounds that have been recommended Janes says that remarkably fine. strong sutures can be obtained from the tail of the rat. By proper manipulation a bundle of five or six tendons can be obtained which are aseptic and can be used as they are, being easily threaded. They can be kept dry or in alcohol, are readily absorbed and very useful in delicate surgery, especially of the eye.

Prescriptions.

In dyspepsia Dr. Wood prescribes: Sulphate of strychnine, 1 grain; dilute nitromuriatic acid, 1 drachm; compound tincture of gentian and compound tincture of cardamom, of each 11/2 ounces; solution of pepsin, sufficient to make 4 ounces. The dose is a teaspoonful after each meal.

For the relief of flatulence Bartholow recommends: Powdered calumba and ginger, of each 1/2 an ounce; senna leaves, 1 drachm; boiling water, 1 pint. After this has been steeped a few minutes it is be strained. The dose is a wine glassful three times a day, preferably without sugar.

+ + + A formula for acidity of the stomach used at Bellevue is as follows: Bicarbonate of soda, 1 drachm; powdered rhubarb root, 1/2 an ounce; spirits of peppermint, drachms; water sufficient to make 4 ounces. The dose is a tablespoonful after meals.

THE DOG STAR.

The star that glows with such unparalleled luster in the southeastern winter's note that the Hindoos, who are largely sky at 8 o'clock is the Dog Star. It now vegetarian, have been and are the chief rises at about 5 p. m. and reaches the meridian at about a quarter past 9 o'clock. to a diminished power of resistance as On next Sunday night, Feb. 11, it will culminate or cross the meridian at exactly 9 o'clock. It is easily found on account of its splendid brilliancy. Manilius, a poet of the Augustan age, says:

"All other he excels; no fairer light Ascends the sky, none sets so clear and The three stars in the girdle of Orion

point southeasterly to the Dog Star. It is four times as brilliant as any star in our latitude, and has received more attention from astronomers than any other star in the heavens. The ancient Egyptians gave it the name of Sirius, fom the River Nile, which was called Siris in their heiroglyphics. They observed that when Sirius first became visible in the east, just before dawn-called the heliacal rising-the overflow of the Nile followed. It was also called At his coming her pulses raced rapid and slow, the Dog Star because, like a faithful watch dog, it warned them of the approaching inundation. They waited for its appearance with deep solicitude, for on the overflow of the river depended agricultural prosperity or blighting drought. They also computed the length of the year from the heliacal risings of Sirius, and it is still known as the "Canicular year."

The Romans were equally solicitous, and were accustomed to yearly sacrifice a dog to Sirius, to render his influence beneficent to agriculture. Virgil says: "Parched was the grass, and blighted was Nor 'scape the beasts; for Sirius on high,

With pestilential heat infects the sky." When the Dog Star rose with the sun and appeared to combine its influence with the solar heat they gave the name of "dog days" (dies Canicularis), which began Aug. 4 and lasted until Sept. 14. Now dog

days begin July 3 and continue until Aug. 11. Owing to the displacement of the constellations by the precession of the equinoxes the time of the heliacal rising of the Dog Star is continually accelerated. Hence, it is evident that modern dog days have no connection with the dog star, but refer to the unchangeable summer solstice. It is now known that dogs are no more likely to go mad during dog days than at any other period of the year. In the "Almagest" of Ptolemy, published in the second century, Sirius is described as a red star; it is now a brilliant bluish white, proving that there has been a decided change in its color during the past two thousand years. Stars are divided by stellar spectra into four classes. The first class, called Sirian stars, include those that are blue and white, such as Sirius, Vega, Altair, Procyon, and, perhaps, half of the stars in the sky. The mass of Sirius is estimated to be four times that of the sun; its distance is fifty trillion miles. Eight and one-half years are required for its light to traverse this vast space. It has a small companion about the size of our sun that revolves very close to it, with a period of fifty-two years. This is called a binary system. While it had been known for many years that Sirius was binary and the elements of the orbit of its attendant been calculated, this companion star had never been seen until one winter night testing a new lens at their factory in Cambridgeport, Mass. It was an eighteen-inch object glass that they were making for the Chicago University, and the younger Clark had focussed it on Sirius. "Why, father," he exclaimed, "the star has a companion The father's practiced eye was quickly applied to the ocular, and there, due east of Sirius, exactly in the position predicted by the astronomer mathematician, a faint star could be seen. The news was flashed around the world and the discovery confirmed at the great observatories of Eu-

Procyon, the Little Dog Star, is also

two Greek words which signify "before the dog." The constellations of the Great Dog and Little Dog are often called the hounds of Orion. In ancient maps of constellations the dogs were represented as being held by leashes in the hand of Orion. JOHN C. DEAN.

THE JOURNAL'S POETS.

Immunity. The Whirlwind and the Tempest Talk: When sounds the night alarm,

And the mad horses rear, And the town thrills with fear, I feel no sense of harm. Or when the thunder rolls Its dull wheels o'er the heart,

And the grim buoy-bell tolls; Or when the white surf rides The rocking waves at sea, No terror stirs in me Of tempest or of tides.

And the fierce lightnings dart,

So, on the battlefield, When the hot bullets sing And death is on the wing, I seek no cover's shield.

"Child, wilt thou answer me?

For I the worst have known: God turned His face away, And death passed by that day And left my soul alone. The Still Small Voice Speaks:

Was't God or thou that day Who turned his face away? This do I ask of thee. "In some familiar place What if kind death doth stand Waiting to clasp thy hand

When thou hast sought God's face?"

Rockville, Ind. -Juliet V. Strauss.

His Proposal. She knew he loved her by each glance, Though he'd not spoken: His hand's quick pressure in the dance, Each flower and token. She waited for the story old As she had read it,

But though his eyes the legend told He never said it!

He sang to her in verses sweet, His accents sued her; He played the banjo at her feet, In rag-time wooed her;

On smooth yacht decks all golden glow, Where starlight blended, Till she began to think him slow

As well as splendid! She led him into quiet nooks, On stairs, demurely,

Might pass securely: And when the band throbbed some deep hymn Or old song story. She steered him gently for the dim Conservatory.

Where lights were low and tender looks

But in a crowded cable car One rainy morning

They rode with many a jolt and jar, The weather scorning, Till swerving round a curve she leaned Against his shoulder, And safely by her big hat screened 'Twas then he told her. -Kate Masterson.

Farewell.

Translated from the German of Viktor von Sad is the fate to human life allotted That underneath each rose must lurk a thorn, And whatso'er the heart may hope and cherish At last the pangs of parting must be borne. In thy fair eyes there seemed to dwell a secret

Which spoke of deep and steadfast love to me.

Farewell, farewell: It might have been a Alas for us that it was not to be.

Scorn, sorrow, envy, these I, too, have tasted, A heart-sick wander or, weary of the storm; Of peace I dreamt a while and quiet hours, When on my path appeared thy luring form. In thy embrace I wanted to recover

And dedicate my youthful life to thee. Farewell, farewell: It might have been s Alas, for us that it was not to be.

The gray day breaks, a sullen storm is raging, A thick fog covers forest, hill and stream; A fitting day for sad farewells and parting, Gray as the heavens the whole wide world

And though it lead to fortune or disaster. Thou cherished maid-my thoughts are still

Farewell, farewell: It might have been

Indianapolis. -Paul H. Grummann.

She was a superior woman, I trow, Who sneered at the antics of Cupid: She vowed all the victims that fell by his bow Where willing were weak or were stupid.

"Forewarned is forearmed." she would tritely "And loving is not worth the losing-What tho' the blind archer be ever so fair,

His targets are not of his choosing." Her haughty disdain to his notice was brought, He saw that his bow-string was properly taut-

He brushed up the uniform made for a man

And a soldier, and Dan Cupid filled it: Then looking as brave as a brave soldier can. He found her proud heart and he thrilled it. While snug in his sleeve Dan carried his bow And hid in her bosom his arrow.

This superior woman repeated all day His virtues, and over, and over-As other have done-while up and away He hurried-the dear, wicked rover! -Josephine Puett Spoonts.

At Flood Tide.

There are some hidden rocks along the shore Where always is the din Of angry surges, and the breakers roar Whene'er the tide comes in.

However calm the peaceful ocean sleeps, As toward the shore it rolls, A shudder rises from its darkened deeps When first they feel these shoals.

There are some reefs near which the calmest thought Draws with a sudden throe, And breaks in wild, tumultuous surges, caught

From quivering depths below. Oh, can we ne'er efface nor quite forget Those loves that once have been? Must these old losses rise to meet us yet Till life's last tide sweeps in?
